

Phishing Awareness Training

Chisom Gerald (Code Alpha intern)

understanding and Preventing Phishing Attacks

- ▶ what is Phishing?
 - ▶ •A cyber attack where attackers trick users into revealing sensitive information like passwords and bank details.
- ▶ Common Tactics
 - ▶ • Urgency
 - ▶ • Impersonation
 - ▶ • Fake Links
 - ▶ • Too-good-to-be-true offers
 - ▶ • Emotional manipulation

What is Social Engineering?

- Psychological manipulation used to trick people into revealing confidential information.
- It targets human behavior rather than technical vulnerabilities.
- It is the foundation of most phishing attacks.

Types of Social Engineering

- Phishing - fake emails/websites
- Smishing - scam SMS messages
- Vishing - scam phone calls
- Pretexting - impersonation
- Baiting - tempting offers

. Common Tactics

- Urgency
- Impersonation
- Fake Links
- Too-good-to-be-true offers
- Emotional manipulation

▶ Example: Fake Job Email

- ▶ •Message claims you've been selected unexpectedly and asks you to click a suspicious link.

▶ Example: Bank Scam

- ▶ •Message claims your account is compromised and asks for login details.
- ▶ •Banks never ask for passwords via email.

▶ Example: Internship Scam

- ▶ •Scammers ask for payment to secure a job or internship.
- ▶ •Legitimate jobs do not require payment.

How to Stay Safe

- Check sender email
- Hover over links
- Don't rush
- Use 2FA
- Verify from official sites

Key Rule

- If it creates urgency, fear, or excitement — pause and verify.

► Quiz

► •Q1: What should you do if you get a suspicious email?

► •A: Verify from official website

► Conclusion

► •Phishing targets human psychology. Awareness is the best defense.
